

Incident Report

Generated

2026-06-02T16:10:16.199582+00:00

Summary

Detected probable authentication failure activity.

Severity

high

Event Type

authentication failure

MITRE ATT&CK Mapping

- **Tactic:** Credential Access
- **Technique:** Brute Force
- **Technique ID:** T1110
- **Confidence:** medium

MITRE Evidence

- Authentication failure event detected.
- Repeated failed login activity may indicate brute force behavior.

MITRE Investigation Steps

- Check source IP frequency.
- Review failed login count per account.
- Verify whether MFA or account lockout controls were triggered.

Indicators

- 10.0.0.5

Recommended Actions

- Preserve the original log evidence.
- Correlate with adjacent timestamps.
- Check whether the source IP appears repeatedly.
- Review account lockout, MFA, and SSH exposure.
- Escalate for immediate human review.

Assumptions

- Analysis is based only on the supplied log text.
- No external enrichment, threat intelligence, or packet inspection was performed.
